

The Hellenic Alumni Association of Tufts University

INVITES YOU TO THE PRESENTATION ENTITLED:

"Darwin's Strange Inversion of Reasoning"

DANIEL C. DENNETT – PHILOSOPHER

Philosopher and scientist Dan Dennett argues that human consciousness and free will are the result of physical processes and are not what we traditionally think they are. His 2003 book *Freedom Evolves* explores the way our brains have evolved to give us - and only us - the kind of freedom that matters, while 2006's *Breaking the Spell* examines religious belief through the lens of biology.

Thursday, April 9th 2009 @ 7:30pm
Megaron Karatza, Aiolou 82-84 Athens
